# REMOTE FIRE DETECTION: THE NEW COMELIT FRONTIER.

MyComelit is the system that allows visualisation, management and control of all Comelit systems connected to the Cloud. Thanks to the MyComelit app and web platform, it is possible for Professionals and Security Managers to monitor the status of the Fire Detection system and manage it remotely quickly and easily.

**COMELIT**
WITH · YOU · ALWAYS

# YOUR FIRE DETECTION SYSTEMS AT THE CLICK

With MyComelit you can manage and monitor all Comelit **fire detection systems** connected to the **Cloud**. Use is simple: just access the **app**
the devices to be supervised and, in the case of complex installations, group them by sites, thus creating a **virtual map** of all the different ac
that, in addition to identifying the location of the installation, thanks to different colours, allow you to immediately understand if everythin
to the operation of the installation. In this case, the app sends a real-time notification or an email to allow you to intervene preventively
professionalism and attention. A **simple and intuitive** but at the same time **flexible and very secure** platform to allow you to manage and r

## Safety with total peace of mind

Manage your systems and installations with the new platform developed by Comelit, designed to **meet your needs** and give you the **peace of mind** of having everything under control in one place.

## Real-time system status display

Check the status of your system **24 hours a day, 7 days a week**. At a glance, you can check the condition of your fire detection systems and connected devices via an **intuitive graphical interface** and dedicated icons.
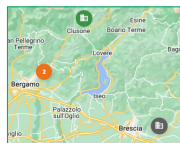

## Remote opera all

Check how the points and zones to the system are programmed, **contamination status** of sensors future fault reports, and exclude devices according to **specific req**

## Graphical maps interactive and navigable

The organisation of the systems in **interactive, multilevel graphical maps** allows the visualisation of the created systems, clickable and with different colours according to the **operational status** of each site.

## Management of maintenance records

Everything always under control. Plan and receive **reminders on scheduled maintenance management**, check the contamination status of sensors and any anomalies in the system to optimise periodic check-ups.

## A team of experts always at your disposal!

When you choose Comelit you choose a company whose **daily commitment** is to be there for you, not only in the research and development of new solutions that are easy to install and use, but above all dedicated to the **daily advice and assistance** we offer both by phone and in the field.

CO

# CALM SPACES: SAFE PLACES FOR PEOPLE

The calm space by definition is that temporary safe place where occupants can wait and communicate with the emergency management personnel or operator.
In such places, it is essential to reassure people by providing them with **clear and intelligible instructions**.
The Emergency button panel communicates to a manned location capable of managing or diverting calls directly to SIP telephone switchboards or, via an App, to Smart Phones and Tablets, so that they can receive assistance on how best to handle the situation, and then complete the exit to a safe place. Not just fire detection systems, **Comelit is all-round security**.

# HORUS: THE INTEGRATED SECURITY BY COMELIT

A supervision platform **with graphic maps** that allows integrated management of all security systems: **burglar alarm, fire detection, video surveillance and video entry systems**. Capable of signalling any emergency immediately to reduce the time and cost of any intervention, it is a real revolution in the electrical sector, suitable even for operators without specific technical skills thanks to its **simple and intuitive user interface**. Particularly suitable for monitoring the security systems of large complexes such as production sites, supermarkets, large companies, shopping centres and office buildings.

LEARN MORE

# UNION DOES NOT MAKE STRENGTH, IT MAKES SECURITY.

**Module 1467**: the first interface enabling integration between Fire Detection and IP Video Door Entry systems, designed to help during fire danger situations.

Imagine the possibility of having the **video entryphone system** integrated with the fire alarm system and having the danger signalled even inside homes or offices by means of audible and visual warnings!

From today, with the new 1467 module, all this is possible: a **highly innovative** service, more and more "tailor-made" to meet the **real needs** of both installation and use, **fundamental** for signalling any anomalies or dangers in an even more immediate and evident way.

A further special feature of this new interface is its **ease of installation and configuration**, and the module can also be conveniently added to an existing installation.
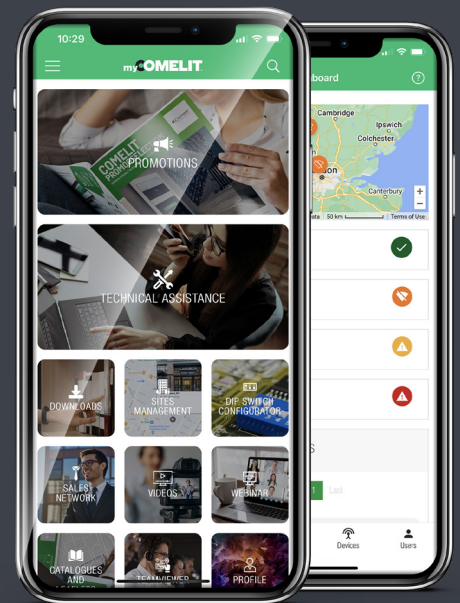

**Integration, people-friendliness and simplicity** are the ingredients of this brand new solution, **unique in the industry**.
