Since **1956**, we have been making history in the door-entry phone and door entry monitor sector and have actively contributed to its **ongoing** development. Over the years, the experience gained in this specific sector when it comes to meeting installation requirements, such as simplicity, **reliability** and multiple functions, has allowed us to grow and make a name for ourselves as an **international benchmark company**.

Our **values** and our business **vision** are the foundation upon which we have developed a well-run, well-structured **global** organisation, with 10 branch offices, 7 Research and Development centres, more than 1000 employees and a commercial presence in over 90 countries. In addition to video door entry systems, we design and build intruder alarm, video surveillance, home automation, fire protection and access control systems, which makes us a **single partner specialised** in **protecting** people and their environment.

Industrial facilities

Welcome to the **forefront of integrated security solutions** with Comelit, where innovation meets practicality in our advanced **IP video door entry systems**. Designed to cater to a diverse range of environments—from residential homes to commercial buildings, large complexes, and industrial facilities—our systems offer **unparalleled security and communication solutions** that redefine access control and safety standards across various sectors.

At Comelit, we understand the unique challenges faced by different types of properties when it comes to security and access management. That's why our IP video door entry systems are crafted not only to enhance the safety and convenience of these spaces but also to seamlessly **integrate** with existing infrastructure, whether it's fire detection in high-rise buildings or access control in sprawling industrial complexes.

UNIVERSAL SECURITY SOLUTIONS

Whether you're managing a boutique set of apartments, overseeing a vast commercial real estate portfolio, or running operations in industrial spaces, Comelit gives you the tools to not only meet but exceed the demands of modern security needs. Join us as we delve into the capabilities and features that make Comelit a leader in security systems, helping to protect what matters most.

INNOVATION & COMMUNICATION

In the universe of communication and security, Comelit's IP video door entry system stands as a beacon of innovation, designed for those who seek not just a solution, but a revolution. Imagine a world where **flexibility** meets **limitless** expansion, where every corner of your space becomes a connection point, **freed** from physical and geographical constraints. Welcome to the **Comelit era**, where each device harmonizes with its surroundings, offering a symphony of interactions unprecedented.

Our IP system redefines the concept of video door entry, transforming every installation challenge into an **opportunity**. With Comelit, your existing infrastructure becomes your greatest ally, allowing you to leverage existing LAN networks for **seamless integration**. This approach not only simplifies installation but heralds an era of efficiency and savings, elevating the user experience to previously unimaginable levels.

- Unlimited devices
- Unlimited distances
- Unlimited users
- Simultaneous conversations
- Use of existing networks
- Multisite integration
- Future-Ready
- Scalable and versatile
- Distributed architecture
- Continuity of Service

BEYOND EVERY LIMIT

Designing for the future, today. Comelit's IP video door entry system is not just an advanced communication system; it is a promise of continuous evolution. Our **multisite** and **multi-technology** technology is ready to meet the challenges of tomorrow, ensuring that your infrastructure is not only compatible with current technologies but also prepared for **future** ones. From transmission via standard network cables, radio bridges, to fiber optics, Comelit adapts, evolves, and exceeds expectations.

But we don't stop there. Our vision also includes creating environments where communication is relentless, even in the busiest moments. Traditional systems struggle to keep up with the flow of simultaneous communications; our IP system, on the other hand, excels, ensuring that every voice is heard, every call handled with **utmost efficiency**, without interruptions or compromises.

At Comelit, we believe that technology should be **reliable**, **resilient**, and above all, intelligent. With our distributed architecture, each device has the ability to operate autonomously, ensuring unparalleled continuity and reliability. This not only minimizes potential inconveniences but guarantees unparalleled peace of mind for our users, knowing their communication system is designed to last.

Choosing Comelit means choosing a partner capable of looking beyond the horizon, committed to bringing innovation, security, and connectivity into everyday life.

Limitless

No worries
No worries

No worries

EASY TO PROGRAM

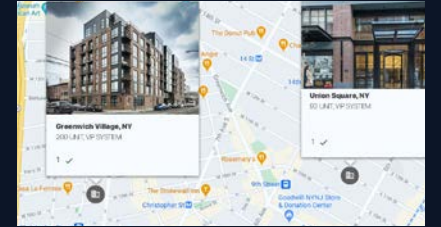

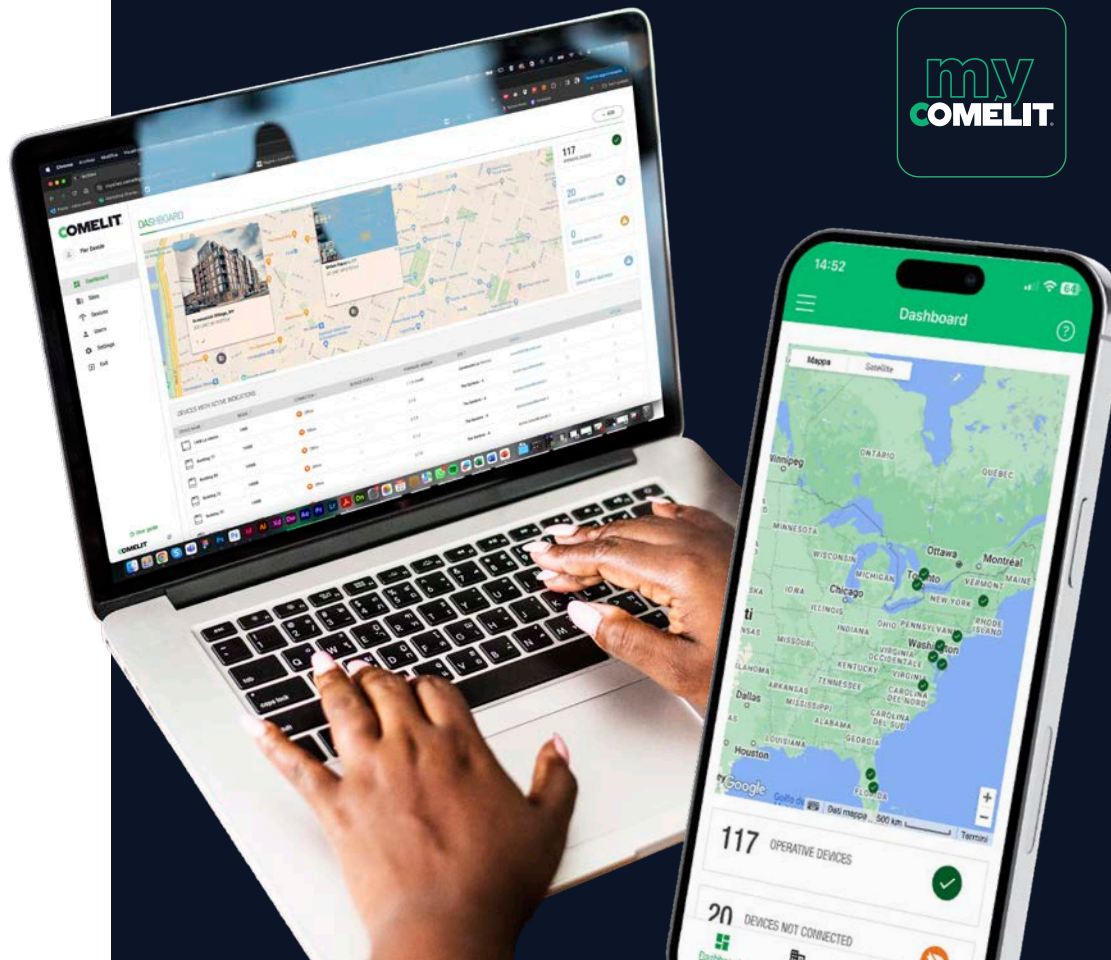

Crafting the IP system's configuration is a breeze, designed with simplicity and speed at its core, requiring no specialized IT expertise. Harness the power of our bespoke **VIP Manager** software, a tool specifically developed to streamline system setup. Experience the **ease** of connectivity as all devices effortlessly embrace their network address (**Auto IP**), eliminating the need for manual adjustments on each device. Once integrated into the network, full configurability of all devices is at your fingertips, **remotely** and **hassle-free**. Additionally, IP enriches communication by offering the capability to dispatch text, audio, and video messages to a broad audience or targeted recipients directly from any remote station, enhancing connectivity and interaction within the network.

EVEN EASIER TO MANAGE

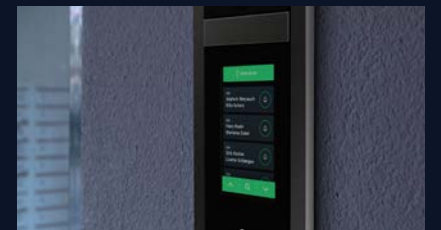

Unlock the full potential of Comelit's integrated **safety and communication solutions** with **MyComelit**, your gateway to effortlessly managing and monitoring Comelit's Video Door Entry, Fire and Anti-intrusion systems through the Cloud. MyComelit simplifies your **oversight**: a single login to our intuitive app or web platform grants you the power to seamlessly add and supervise your devices within the "System Management" section.

For intricate setups, effortlessly organize devices by **site**, crafting a comprehensive virtual overview of all your active installations. Each visit to your dashboard reveals a meticulously designed map, pinpointing every system's **location and operational status** with vivid, color-coded indicators. You can instantly grasp the health of your systems for functional perfection or the slightest irregularity.

Interactive map

Managing multiple buildings and struggling to quickly pinpoint the one you need? MyComelit simplifies this by displaying all your buildings on an interactive map.

HYBRID SOLUTION: IP + 2WIRE

TWO WORLDS COMING TOGETHER

Experience **unparalleled connectivity and flexibility** with our 2-wire and IP video door entry systems, now seamlessly integrated through the innovative **1469 interface**. This powerful combination ensures easy installation and offers an array of advanced functions, alongside the promise of limitless expansion for IP video door systems.

Merging these technologies has never been simpler: install door entry phones, monitors, and actuator modules using the straightforward 2-wire setup, while fully embracing the broad capabilities of IP technology across all devices. Elevate your access **convenience** to new heights with high-definition video calls directly to your smartphone and share virtual access keys effortlessly. For installers and building managers, remote management of the Comelit App for users—whether enabling, disabling, or updating details on external units—is a breeze through MyComelit, accessible from both **app and web browser**.

DIFFERENCES AND SIMILARITIES BETWEEN SYSTEMS

Which is the most suitable?

	2-WIRE SOLUTION	HYBRID SOLUTION	IP SOLUTION
Number of users	120,000	No limitations	No limitations
Maximum distance between external and internal unit	1200 m	130 m for Audio or A/V SB2 risers, 200 m for A/V SB1 and 800 m for Audio SB1. No limitations for IP system base	No limitations
Wiring	2 wires for the riser, 4 wires for the external unit	2 wires for 2-wire CAT5 risers or higher IP system base	CAT5 or higher
Remote connection and update	Only with 6741W	Only 6741W for 2-wire risers and all IP devices	All devices
Answering a video entry phone call from the Comelit App	Yes	Yes	Yes
Updating names in the directory from MyComelit	No	IP external units only (with item 1456B)	Yes (with item 1456B)
Switchboards	Yes	No limitations for IP switchboards	No limitations
Memovideo	Only with 6741W	Only with 6741W for 2-wire riser and all video internal units and IP switchboards	All video internal units and IP switchboards
Viewing live video from IP cameras (RTSP)	Viewing from the Comelit APP only with 6741W	Viewing from the Comelit APPs, door entry monitors and IP switchboards	Viewing from the Comelit APP, door entry monitors and IP switchboards
Actuators	Max. 8	Max. 8 for 2-wire riser	No limitations
Integration with SIP devices	No	YES (with item 1456G)	YES (with item 1456G)
Call logs and recordings	No	IP devices only	Yes
Support for multiple simultaneous calls	No	YES (one for each riser)	Yes
Integration with Comelit fire protection	No	IP devices only	Yes
Integration with the Comelit Horus supervision system	No	IP external units only	Yes

Retrofit

Facing the challenge of updating an older building? Want to use existing 2-wire cabling while infusing modern functionalities for users and building managers? Comelit stands ready with the perfect solution. Maintain all internal connections through the reliable 2-wire bus system, and simultaneously embrace the future by integrating external units, switchboards, and all IP-based products. This blend of old and new creates a flexible, high-performance foundation that is always up to date with the latest functions. Transform the old into a cutting-edge experience with Comelit.

↑ DON'T SETTLE FOR BASIC

Step up to a fully integrated smart intercom system

Introducing the **1456B**, Comelit's revolutionary **Multi-user Gateway**, designed for shared network lines within IP Comelit systems. This innovative gateway extends the functionality of your external stations, allowing responses via the IP Video Door Entry, smartphones or tablets through the Comelit App, and even GSM or landline phones. Engineered to support an expansive ecosystem of **up to 400 users**, the 1456B ensures that scalability is within reach. Should your community grow beyond 400, **expanding your system** is straightforward with the addition of more gateways, allowing for upgrades at any stage after the initial installation.

→ SIP integration

The Comelit IP video entry system, thanks to its compatibility with the **SIP standard**, makes it possible to standardise audio and video communication between different systems, meeting a variety of needs. The video entry system can be **easily integrated** into home and building automation and **home entertainment solutions**. This maintains a uniform user experience, managing the video door phone functions of the Comelit system in a smooth and intuitive way. Door-entry calls can also be integrated and managed through **traditional telephony systems**, such as **residential landline** telephones, or within **business telephony infrastructures**. This allows intercom calls to be answered directly from the telephone and activation commands to be executed directly from the device keypad.

Comelit offers 3 different licensed answering solutions, and each license can be managed by up to 15 devices, and different configurations can also be set up for individual users or groups of users remotely.

↑ security in a nutshell

HIGH RES MEANS HIGH SECURITY

In the age of connectivity and integrated **security**, the video door entry system emerges not merely as a simple communication device, but as a fundamental pillar in the **protection** of living and working spaces. Video door entry systems stand at the pinnacle of personal and property defense, revolutionizing the traditional concept of security through innovation and technology.

The **visual clarity and audio precision** offered by modern IP video door entry systems are no longer a luxury, but a **necessity**. In this context, high-definition imagery in every condition, **during the day or the night**, becomes an indispensable feature, turning every video door entry into a digital sentinel that ceaselessly watches over the entrance to your home or business. But that's not all! The introduction of video door entry systems at various building levels, especially at apartment doors, further elevates the level of security. This expansion of the video door entry system acts as an added bulwark, an **extra defense** that stands between the tranquillity of private spaces and the uncertainty of the outside world.

IP technology, the core of these advanced systems, ensures superior quality transmissions, making every visual detail and every sound nuance **crystal clear**. This precision not only facilitates accurate identification of visitors but also ensures **clear and unambiguous communication**, a fundamental element in every secure interaction.

FACIAL RECOGNITION

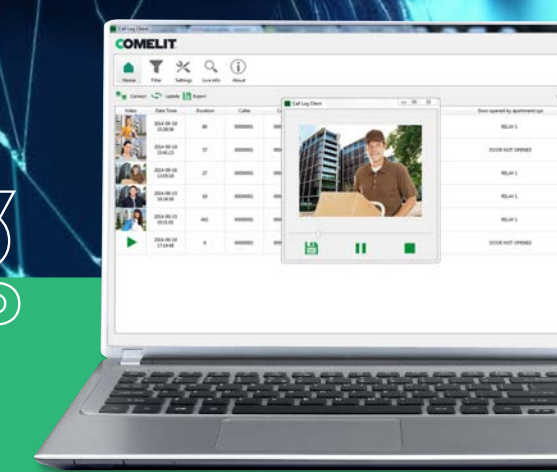

Comelit's facial recognition system leverages **unique biometric markers** for identity verification, offering residents **seamless** entry without the encumbrance of physical keys or devices. It is a **professional-grade** solution that combines safety with convenience, allowing for the remote management of users and their access permissions. This system not only streamlines the process of who gets in but also adds a layer of sophistication to the **access control** mechanism. Managed from a central point, it simplifies the administration of access rights, making it an indispensable tool for modern security management. With Comelit, you're not just controlling doors; you're overseeing a comprehensive **security protocol** that's intelligent, adaptable, and always a step ahead.

→ Call Log

ALWAYS KNOW WHO DID WHAT AND WHEN

True security lies in **always knowing who enters** your property. A robust security system is designed to provide real-time insights into activities within the premises—monitoring who comes and goes. However, its utility extends beyond mere real-time surveillance. In moments of necessity, the ability to **delve into historical data and events becomes invaluable**, offering a retrospective view

that can help in understanding patterns, identifying security breaches, or even aiding in investigations. This depth of information, seamlessly integrated and easily accessible, transforms a security system from a simple gatekeeper to a **comprehensive guardian of your space**, ensuring peace of mind with the power of knowledge at your fingertips.

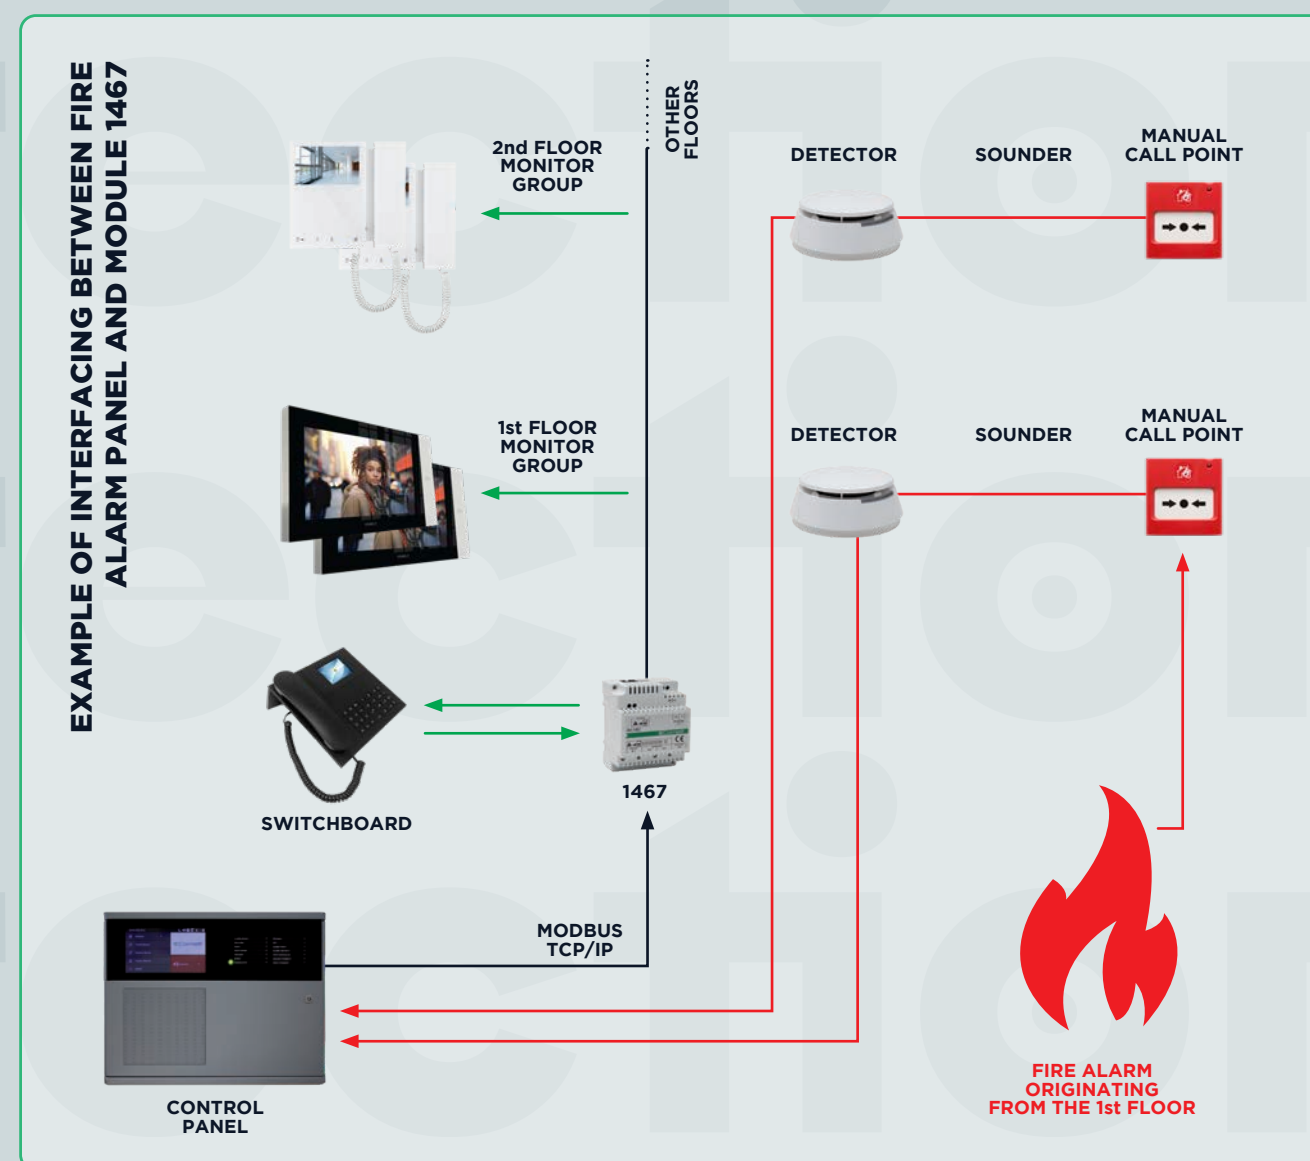

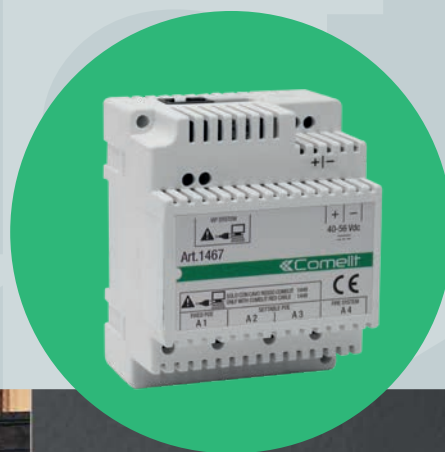

INTEGRATION THAT SAVES LIVES

Envision a world where your video entry system doesn't just welcome guests but also **stands guard against fire hazards**, seamlessly integrated with your fire protection system to deliver both **visual and audible warnings** directly where you live or work. The future of comprehensive safety is embodied in our latest innovation, the 1467 module. This cutting-edge service is designed with precision to meet the specific needs of installation and operation, becoming an **indispensable ally** in conveying any irregularities or dangers with unmatched clarity and immediacy.

What sets the 1467 module apart is not just its pioneering technology but also its user-centric design, ensuring its addition to your safety arsenal is **as smooth** as it is **effective**. Its integration into existing systems is straightforward, highlighting our commitment to innovation that enhances, rather than complicates, your security setup.

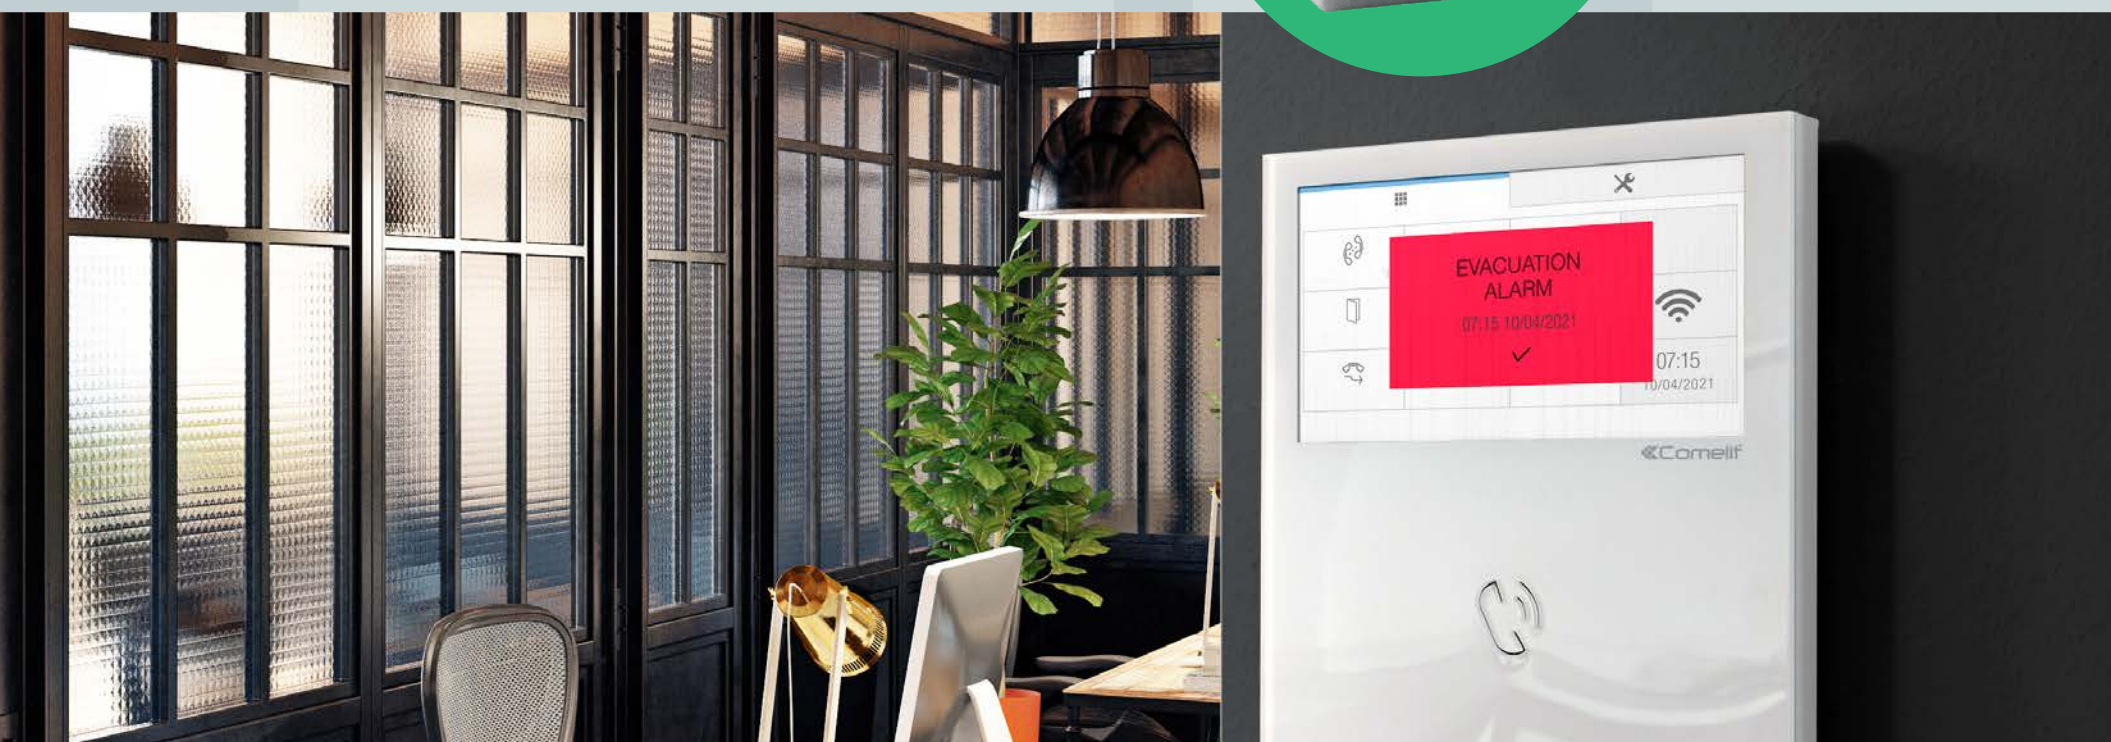

At the heart of this unparalleled solution lies a blend of integration, simplicity, and a deep focus on user needs, making it a **singular offering in the security sector**. The synergy between Comelit's IP video entry system and the fire detection mechanism offers an unparalleled oversight of your building's safety.

Extra level
of security

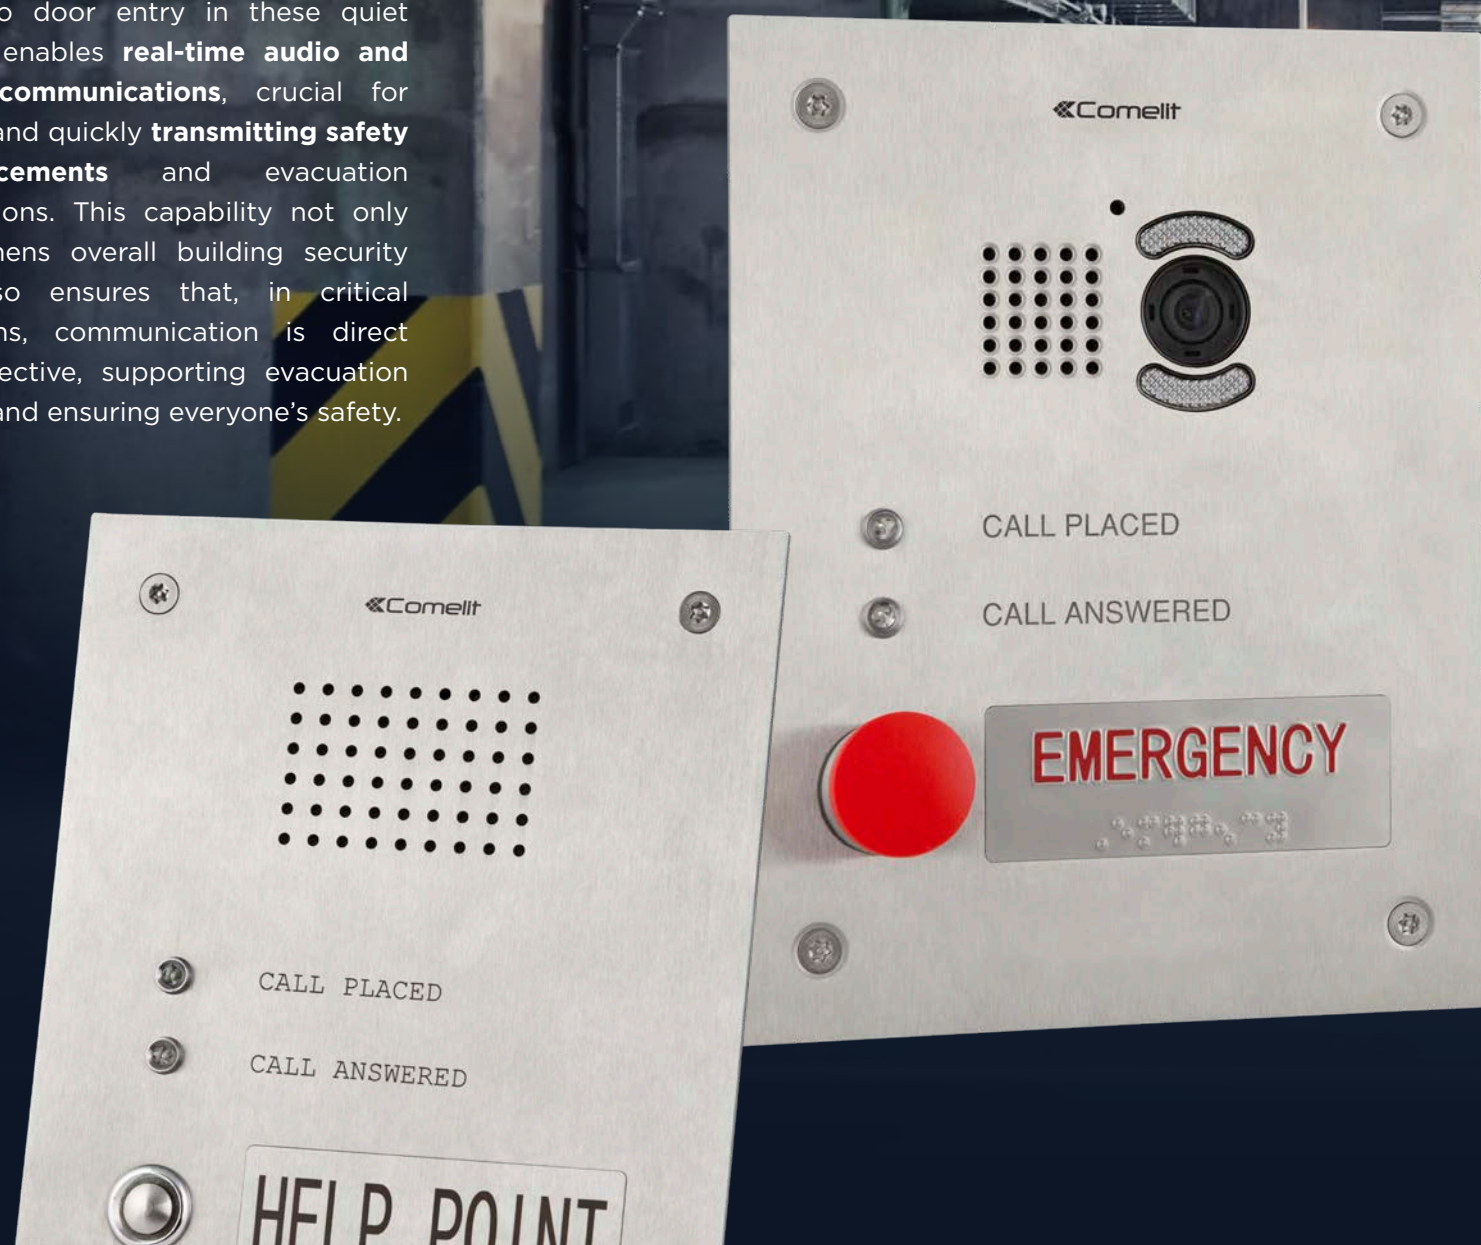

Utilizing the 1467 interface, the video entry system intelligently categorizes and sends alarm signals across apartments, floors, or specific areas. Upon detection of a hazard, **instant pop-up messages** and sound alerts are relayed to the door entry monitor. Moreover, with an active internet connection, occupants can receive real-time **notifications on their smartphones** via the Comelit App, ensuring that you're informed and prepared, no matter where you are.

In buildings equipped with a porter switchboard, it transforms into a central hub for all alarm and fault notifications from the fire alarm control panel, further enhancing the safety net around your environment. This integration not only elevates the security of your premises but also brings **peace of mind** into the palm of your hand.

EFFECTIVE EMERGENCY COMMUNICATIONS

Comelit's IP video door entry system seamlessly integrates with **fire detection systems**, enhancing emergency management in building "quiet spaces." These areas are designed to **offer refuge** during evacuations, increasing **safety for residents and staff**. Implementing IP video door entry in these quiet spaces enables **real-time audio and video communications**, crucial for clearly and quickly **transmitting safety announcements** and evacuation instructions. This capability not only strengthens overall building security but also ensures that, in critical situations, communication is direct and effective, supporting evacuation efforts and ensuring everyone's safety.

ALWAYS SAFE & SOUND

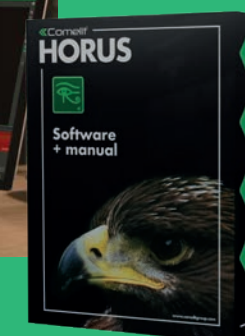

Elevate your monitoring capabilities and secure your spaces with ease, ensuring the **highest level of protection** and safety. With Comelit, you can integrate the camera views from external video door entry stations into your **CCTV surveillance platforms** using the most commonly adopted and easily integrated communication standards. This seamless integration provides a comprehensive overview of entry points and areas, enhancing your security infrastructure with advanced surveillance capabilities.

DISCOVER HORUS

Horus is an **advanced security management platform** made by Comelit with graphic mapping for

monitoring large facilities and buildings. It integrates Fire systems, Intrusion detection, CCTV, and IP door entry video systems, offering emergency real time alerts and a user-friendly interface.

EVERYTHING UNDER CONTROL

Access
Control

DISCOVER MORE
Download the Brochure

With the acquisition of PAC-GDX, renowned for its **excellence in access control**, Comelit has enhanced its security portfolio with the PAC access control range, embracing continuous evolution and compatibility while meeting **top market security standards**.

The video door entry system, foundational to any residential security structure, provides essential access control and the first layer of defense. When integrated into Comelit's broader access control solutions, its value is significantly amplified, delivering a professional, secure management system for entries in **medium to large facilities**, across residential and commercial sectors. This holistic integration allows administrators to precisely control user access with specific credentials, enhancing security across the board. Thus, the video door entry system extends beyond its traditional scope, becoming a **key component** of access control. This amalgamation heightens security measures and simplifies operational processes, showcasing Comelit's prowess in crafting integrated, advanced security solutions that respond to modern security challenges.

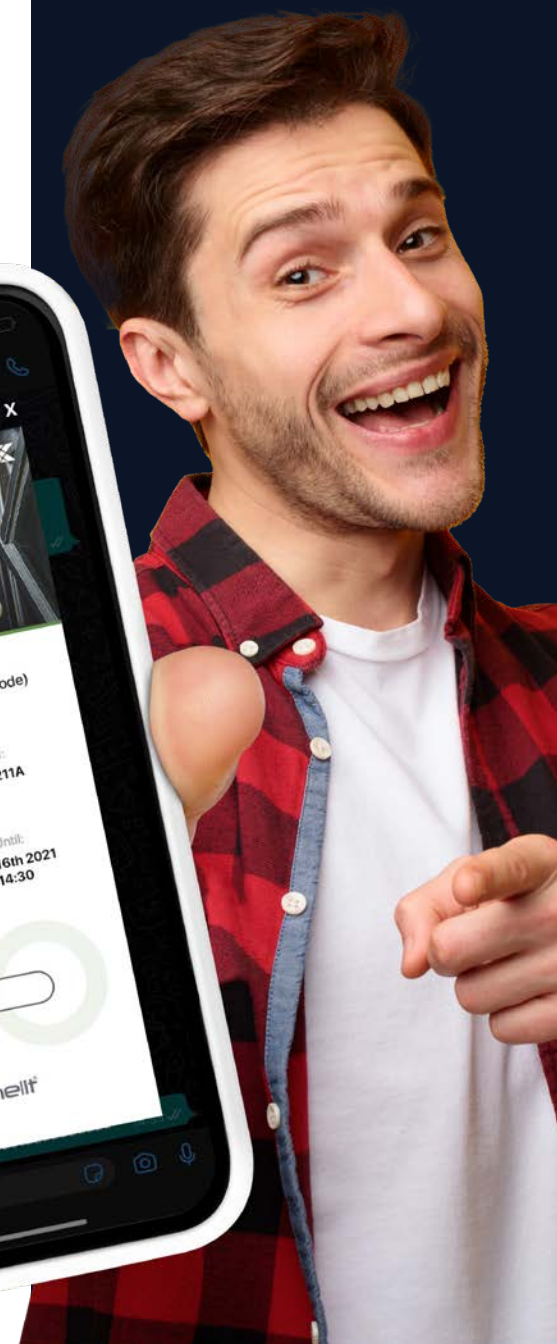

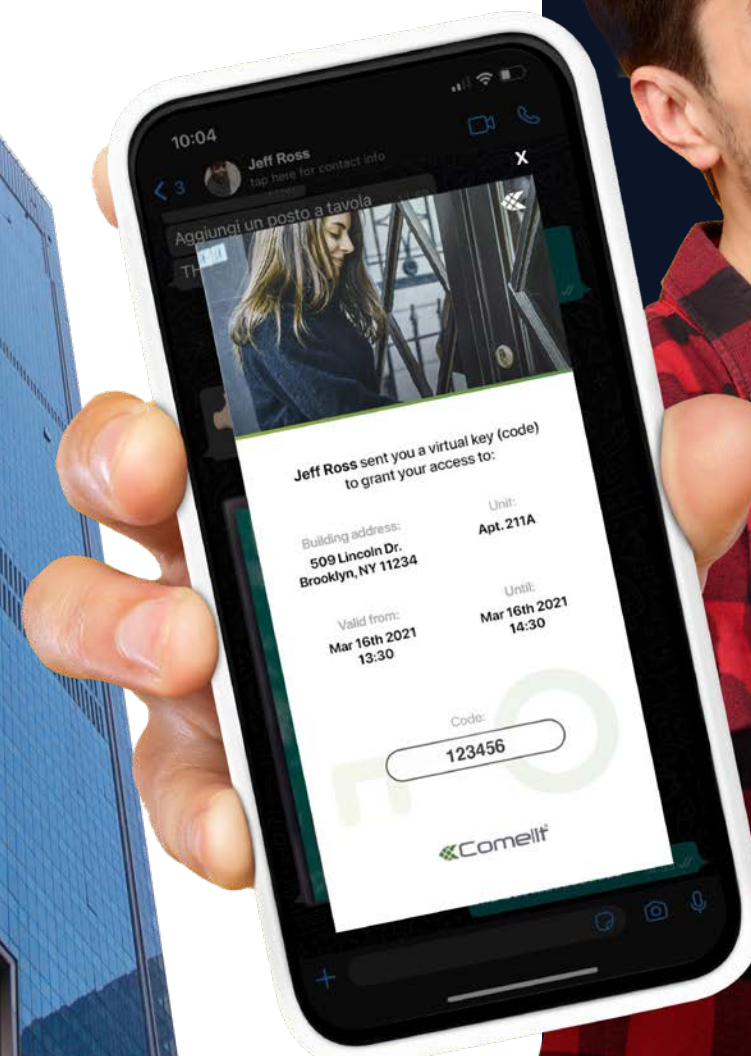

VIRTUAL KEYS

Comelit IP video door entry system allows you to have **virtual keys and temporary access** codes which significantly streamlines entry and exit, offering **unparalleled convenience**. Gone are the days of fumbling for keys or access cards; virtual keys transform smartphones into secure, easy-to-use access devices. This modern solution allows for the remote management of access, enabling property owners to **grant or revoke entry permissions** from anywhere, at any time.

Temporary access codes can be customized for specific durations or single uses, ideal for guests or service visits, ensuring they receive access when needed without compromising long-term security. This approach not only **simplifies the management** of entry permissions but also enhances the overall user experience, making access smooth and hassle-free for everyone involved.

You can choose
between sharing a QR
code that has to be
shown to the camera or
a numerical code to be
typed into the keypad
(physical or digital).

DATABASE INTEGRATION WITH PROPERTY MANAGEMENT SYSTEMS

The video door entry system is intimately connected to the residents of a building, requiring management of numerous **resident-related services**. To streamline these management tasks, integrations with widely used systems in key markets have been developed. This allows managers to make a single update on the utilized **platform**, and the **integrated Comelit system** automatically receives all necessary information. Changes such as **updating names** on external video door entry stations or **automatically activating call forwarding** to residents' smartphones are seamlessly implemented, enhancing efficiency and reducing the administrative burden.

Seamless integration

ELEVATOR CONTROL

Seamless integration and enhanced security with our ultramodern IP video door entry system **perfectly synchronized with your building's elevator operations**. This innovative system reduces wait times and increases tenant satisfaction by ensuring secure, streamlined access directly to your floor. Upon **entering your access code or swiping your badge at the external station, the elevator is automatically summoned**, minimizing delays and enhancing security by preventing unauthorized access. This feature ensures a swift and efficient journey to your desired floor **without compromising safety**.

Visitors benefit from this enhanced security as well. Once they receive access through the video door entry system—either remotely via an app or directly at the panel—the elevator **promptly arrives at the ground floor** ready to escort them, closely monitoring and **controlling visitor movement** within the building. This integration not only simplifies and secures movements within the building but also significantly enhances the **overall living experience**, making your property a standout in today's competitive real estate market.
